

JAVA TEAM LEAD

(Immediate Requirement)

Req. # 4949

About Company:

NISC Export Services Private Limited (NES), a strategic software development partner of EBSCO Information Services (EIS) of Ipswich, Massachusetts, is seeking a Senior Software Engineer to play a key role as an individual contributor and team leader. The position requires strong communication skills with a proven ability to collaborate effectively across departments, with other team members and internal customers to solve complex business and technical issues.

The position is based out of Hyderabad (Cherlapally) but the individual will work directly with EIS's Enterprise Systems Development Group in Ipswich, MA. Travel to Ipswich may be required for training or other purposes.

EBSCO Information Services, Ipswich MA, is a leader in the on-line reference marketplace selling to libraries, corporations and medical institutions worldwide. EIS's unmatched content, usability and service make EBSCOhost® databases the most-used online information resources for millions of researchers in thousands of institutions worldwide. Its technical expertise and superior products have resulted in tremendous growth over the last few years, creating an excellent employment opportunities.

Job Description:

- Object-oriented software design and development using Java
- Relational database design, development and analysis, including stored procedure development in PL/SQL
- Project and technical leadership
- Mentoring and support of less senior staff
- Leading Code Reviews of the development team
- Requirements analysis
- Active involvement in test planning and performance testing
- Defect fixing and troubleshooting
- Monitoring and evaluation of software and database development technologies, techniques, and trends on an ongoing basis.
- Open and timely communication with regard to project obstacles, issues and resource conflicts

Must Have:

- 6+ years of software/database development experience.
- Comfortable tasking and holding fellow team Developers accountable for delivering high-quality solutions.
- 5+ years building enterprise-scale systems in Oracle or SQLServer.
- 5+ years with object-oriented design/development principles.
- 5+ years experience with server-side Java.
- 5+ years with Enterprise Java components including Spring and/or Struts, Hibernate, iBATIS, JDBC, XML.
- 5+ years with relational database design and development; strong SQL skills.

- 4+ years writing technical documents/specifications and comfortable documenting functionality/applications as required to benefit dev and QA teams.
- Excellent verbal communication.
- Excellent written communication.
- Positive attitude & team player.

Nice to Have:

- Experience working with Agile software development methodologies a strong plus.
- Experience with Style Sheets, HTML, DHTML, AJAX, jQuery and Lucene is ideal, but not required.
- Experience with PL/SQL is ideal but not required.
- Self-directed work ethic and willingness to foster new ideas.
- Strong track record of effective team leadership and project success.
